

## **Lincad responds to increased demand for battery storage and maintenance**

Press Release - Tuesday 14<sup>th</sup> November 2017

Lincad, a leader in the design and manufacture of bespoke batteries, chargers and power management systems for military and commercial applications, is responding to an increased demand for the storage and maintenance of batteries. Now, existing and new customers to Lincad including third party battery manufacturers and suppliers, are able to safely and securely store batteries of any chemistry, including lithium-ion, at the company's HQ in Surrey.

Lithium-ion cells have an extremely high energy density which is why their use is growing rapidly, not just for specialist applications but also in an ever-expanding range of portable consumer products and electric vehicles. Whilst they are inherently safe, they do need to be stored, used and maintained properly.

**Peter Coplestone**, Lincad's Director of Operations commented:

*"At the forefront of lithium-ion battery technology and design, we are exceptionally well placed to meet the growing demand for a safe, secure and cost-effective battery storage service. With our dedicated facilities and skilled personnel, including a Dangerous Goods Safety Advisor, we are now able to offer a battery storage service."*

Complementing its battery storage service, Lincad recently opened a new Service & Maintenance Centre. Greatly augmenting its after-sales provision for existing customers, this new centre has strengthened Lincad's potential to expand further into the servicing and maintenance arena to meet an increasing requirement for through life support.

- ENDS -
